

Heavy Goods Vehicle Review

Freight and Heavy Goods Vehicles (HGVs) is an important aspect of fleet management. Our HGV Reviews are the best place to start, as they can determine how sustainable an HGV fleet operation is, explore opportunities to reduce emission and fuel costs, and demonstrate how best practice, new technologies and different fuel types could be applied to reduce future expenditure.

A dedicated Fleet Support Manager will work closely with you, using the data you provide and whole life costing to measure fleet operational efficiency, carbon footprint and more.

The final review will take the form of a comprehensive report, providing advice on:

- ✔ driver behaviour and incentives
- ✔ ultra-low emission vehicles, and alternatives vehicles and fuels
- ✔ Clean Air Zone and Ultra-Low Emission Zone compliance
- ✔ technology to improve vehicle performance
- ✔ load optimisation
- ✔ fuel management
- ✔ retro-fit options
- ✔ vehicle type
- ✔ potential funding sources.

Am I eligible?

This review is available at no cost for all business and public sector organisations operating HGVs in England, ideally over 3.5 tonnes but others can be considered.

To apply for an HGV Review email fleetadvice@est.org.uk
