

Ultra-Low Emission Vehicle Review

An Ultra Low Emission Vehicle Review will identify where plug-in or alternatively-fuelled vehicles could be appropriate and cost effective for your fleet.

These reviews can include vans, company cars, grey fleet, pool and hire cars. They consider operational constraints, grants, future trends and charging infrastructure requirements.

The review will take the form of a comprehensive report, with recommendations on specific vehicle alternatives to build a greener fleet and the next steps to take.

An Ultra-Low Emission Vehicle Review involves four steps:

1. Identify opportunities to replace existing vehicles with plug-in alternatives, considering vehicle profiles and duty cycles
2. Analyse and compare whole life costs for potential replacement vehicles, both conventional and electric, factoring in any grants and tax benefits
3. Consider operational aspects such as re-charging within duty cycles and route optimisation
4. Guidance on driver acceptance and education, and signpost to efficient driver training to improve vehicle range.

Am I eligible?

This review is available at no cost for most private and public sector organisations in England.

To apply for a Ultra-Low Emission Vehicle Review email fleetadvice@est.org.uk
